

# WORK ALONE

LONER COMPLETE—AN AFFORDABLE  
SAFETY MONITORING PROGRAM

# Loner

COMPLETE

## Comprehensive, Turnkey Safety Monitoring

### Every job, application, and location

If you're adopting safety monitoring for the first time or considering an upgrade of your existing work-alone process or solution, Blackline has you covered.

Our new Loner Complete program provides everything that an organization requires to deploy the most sophisticated safety monitoring system in the least amount of time, with the fewest headaches, and in the most affordable fashion.

With zero upfront fees, Loner Complete delivers our Loner Bridge System as a service program with an affordable monthly fee—it includes everything you need.

# 53M

*In just North America and Europe, there are an estimated 53 million employees who work alone—Berg Insight*

*How do you ensure the ongoing safety of your team throughout the workday, no matter where they are?*

# Affordable Safety Monitoring

## A monthly fee that's friendly to capital budgets

Many organizations are controlling their spending closely with the current oil price and other economic pressures. Further, an upfront investment into a new safety program can be difficult to justify.

Blackline's Loner Complete safety monitoring program does away with hardware purchase and delivers new equipment as part of a comprehensive service program. As a three-year operating lease, Loner Complete does not dip into capital budgets and provides industry-leading monitoring capability with a palatable monthly charge.

Loner Bridge portable base station

**\$150**

### **Affordable monthly fee**

*Loner Complete provides everything your company needs to deploy a true safety monitoring system for your remote personnel.*

Loner Complete includes the following features.

- Consulting and employee training
- Blackline's in-house 24/7/365 Safety Operations Center monitoring
- Full warranty coverage for the duration of the program
- Product replacement budget for lost or damaged Loner® devices
- The option to upgrade to new equipment with Loner Complete renewal

# Hassle-free Deployment

## All consulting and training is included

Blackline assigns a Customer Engagement Manager to work with clients to create a comprehensive program to design and deploy an industry leading Loner safety monitoring program in four easy steps. There are no additional fees within Loner Complete regarding the management of a customer's Loner project.

- **Design**—the customer organization structure, sites, risks, and employee roles are used to create device operating profiles and custom alert profiles that suit the organization
- **Employee training**—all employees are trained on device usage and the work-alone policy, including monitored employees and supervisors
- **Test operation**—the entire deployment enters a testing phase to familiarize employees with the program and provide the capability against design goals
- **Live operation**—When ready, a customer deployment is transition to live monitoring to ensure that all safety alerts reach efficient resolution through designed emergency response management processes

Creating a work-alone policy and procedures is just as important to an organization as rolling out an effective communications program to employees. Gaining buy-in from the start is an important step in safety monitoring adoption and Blackline is there to help you manage this overall program.

### **Did you know?**

*An effective safety monitoring program begins with a risk assessment followed by addressing any outstanding workplace hazards and a study of the employee roles and their work-flows. From there, an informed work-alone policy and a Loner device use policy can be created.*

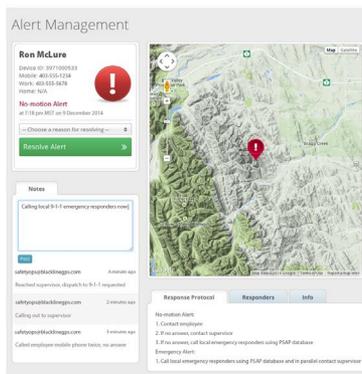

*Loner 900 person-worn device*

# Loner Bridge System

Monitoring the safety of employees beyond the coverage of cellular networks has historically been a challenge. Blackline's Loner Bridge System addresses this challenge in two parts—the Lone Bridge portable satellite and cellular base station, and the Loner 900 person-worn safety monitoring device. Equipped with the Loner Bridge System, employees can rest assured that their safety is being monitored nearly anywhere on Earth.

## Loner Bridge portable base station and vehicle tracking system

Blackline's Loner Bridge portable base station maintains two-way communication with Blackline's monitoring infrastructure. It relays safety and location data between Loner 900 employee safety monitoring devices and monitoring personnel. An industrial-grade 900 MHz radio link connects up to ten Loner 900 devices to each Loner Bridge base station. This radio link allows an employee to operate with Loner 900 up to 2 km (real-world) away from a Loner Bridge base station.

Loner Portal web monitoring application

### Did you know?

*Blackline is the only company that offers a broad safety monitoring portfolio including satellite and cellular communications, a powerful combination of automatic and manually-triggered incident detection, and GPS plus proprietary indoor positioning technology.*

Loner Bridge is portable and self-powered—it can be moved from a vehicle to an ATV, boat, or even backpack in seconds. Further, Loner Bridge is itself a powerful vehicle tracking system, providing enhanced value to an employer's operations.

### **Loner 900 intrinsically safety monitoring device**

Loner 900 is the industry's first comprehensive safety monitoring solution for remote employees. It features the same confidence-inspiring SureSafe® monitoring indication light and safety alerting features as Blackline's Loner SMD and Loner IS+. Critically, its industry-leading 900 MHz radio link to Loner Bridge enables users to operate indoors up to 1 km away. This simply is not possible with other one-part satellite communications systems, including satellite phones, that require a clear line of sight to satellites.

Loner 900 meets the harsh demands of industrial applications and is designed to IP 65 ingress protection levels against dust and water.

## End-to-End Ownership

### **Custom safety monitoring solutions**

Blackline GPS has complete technological ownership of its solutions, enabling the company to deliver creative and compelling solutions to meet the requirements of its diverse customer base. We have designed our Loner product family to be scalable and customizable to ensure that it provides value to organizations of all types.

Let us help you deploy the a safety monitoring program that delivers the best possible fit for your organization.
